DecodeLabs — Data Analytics Internship

Project 1: Data Cleaning & Preparation — Change Log

Prepared by: Bilal | Dataset: Dataset_for_Data_Analytics.xlsx | Rows processed: 1,200

This log documents the full data-integrity audit performed on the raw dataset, per the Project 1 brief: identify missing values, remove duplicates, and correct formatting of dates, numbers, and text. Each row below records what was checked, what was found, and the resulting status.

Change ID	Description	Impact	Status
CR001	Filled missing CouponCode values	309 blank cells (orders placed without a coupon) standardized to 'NoCoupon' instead of being left null	Resolved
CR002	Checked for duplicate records	Audited all 1200 rows for full-row duplicates and duplicate OrderID values -> 0 duplicate rows, 0 duplicate OrderIDs found	Verified clean (0 found)
CR003	Standardized Date column to ISO 8601	All 1200 dates converted/verified as YYYY-MM-DD; 0 unparseable dates found	Resolved
CR004	Enforced 2-decimal numeric precision on UnitPrice & TotalPrice	Rounded both columns to 2 decimals; cross-checked TotalPrice = Quantity x UnitPrice -> 0 mismatches found	Resolved
CR005	Trimmed whitespace & checked text consistency	Checked 9 text columns for stray whitespace/casing issues -> 0 cells corrected	Verified clean
CR006	Validated Quantity & UnitPrice ranges	Checked for zero/negative Quantity or UnitPrice -> 0 invalid quantities, 0 invalid prices found	Verified clean (0 found)

Verification Gate result: 0% duplicate OrderIDs, 0% incorrectly formatted dates, 0% numeric-precision mismatches. Dataset meets the Project 1 threshold for handoff to Project 2.
